

What Is Claimed Is:

1 1. A connector, comprising:
2 a first housing defining a through hole;
3 a second housing having a threaded post;
4 a screw passing through the through hole and fastening to
5 the threaded post; and
6 a resilient lever having a hook for sustaining a pulling
7 force, rotatably connected to the threaded post so
8 that pulling force is substantially directed to the
9 threaded post.

1 2. The connector as claimed in claim 1, further
2 comprising a key contacting the resilient lever, the resilient
3 lever rotated by the threaded post when the key is pushed.

1 3. The connector as claimed in claim 2, wherein the
2 resilient lever further comprises a pressing portion and a
3 curved portion, the key presses the pressing portion when
4 pushed, and the curved portion rotates closely around the
5 threaded post.

1 4. The connector as claimed in claim 3, further
2 comprising a body and a constraining wall, wherein the body is
3 contained in the first and the second housings, a gap formed
4 between the body and the threaded post receives the constraining
5 wall, and the curved portion of the resilient lever is limited
6 between the threaded post and the constraining wall.

Client's ref. : A91247

/Cat/Kevin

- 1 5. The connector as claimed in claim 4, wherein a profile
- 2 of the constraining wall corresponds to the curved portion of
- 3 the resilient lever.
